BENDABLE PATCH CORDS

We are pleased to introduce our Bendable Patch Cords – flexible and reliable solutions designed for modern structured cabling systems and high-density network environments.

Thanks to their bendable construction, these patch cords enable easier routing and faster installation, even in tight spaces, without compromising signal quality. This makes them an excellent choice for data centers, network racks, and professional network installations.

Our bendable patch cord solution is available in multiple categories:

- Category 6A U/FTP
- Category 6A U/UTP
- Category 6 U/UTP

This variety allows you to select the most suitable option for your specific application and performance requirements.

Standards and Compliance

All Bendable Patch Cords meet modern technical requirements and comply with relevant industry standards, ensuring reliable and stable network performance.

BESTLINK NETWARE

Smart Micro Modular Data Center is a combination of cabinet infrastructure and server devices. Based on the concept of centralized power supply, centralized heat dissipation, centralized management, and high-density design, Smart Micro Modular Data Center can be adapted to various model configurations andcustomized on demand. It has built-in compute nodes, storage nodes, and network nodes, and provides an overall power supply and heat dissipation solution to form a standardized and finished server cabinet assembly.

Product Features:

- The cabinet integrates UPS, power distribution, battery, monitoring, and air conditioning.
- The cabinet adopts the closed air flow form, effectively using the cold capacity of the air conditioner, DC frequency conversion air conditioning, energy saving and low carbon.
- Emergency cooling design, safe and reliable. Adopt air-cooled air conditioning to meet the needs of different applications.
- Cabinet level machine room, save site area.

FiBLU
App-Based Fiber Network Tester & Certifier

AEM networks Future Smart.

FiBLU is a new generation app-based, fiber certification solution that shifts intelligence from fixed hardware to a smartphone app. FiBLU fundamentally changes how fiber testing is done–making it faster, more collaborative and dramatically more cost-effective over the life of the network.

The UNIBLU app, downloadable from Google Play Store and Apple's App Store, enhances productivity by allowing scanning of cable labels, with character recognition, GPS location tagging with test results, and many more features.

Why FiBLU?

App-first by design-a true industry shift

FiBLU is not a traditional tester with an app added on; it is app-native at its core. The smartphone becomes the interface, the computing engine and the collaboration platform-unlocking capabilities that screen-based testers cannot offer.

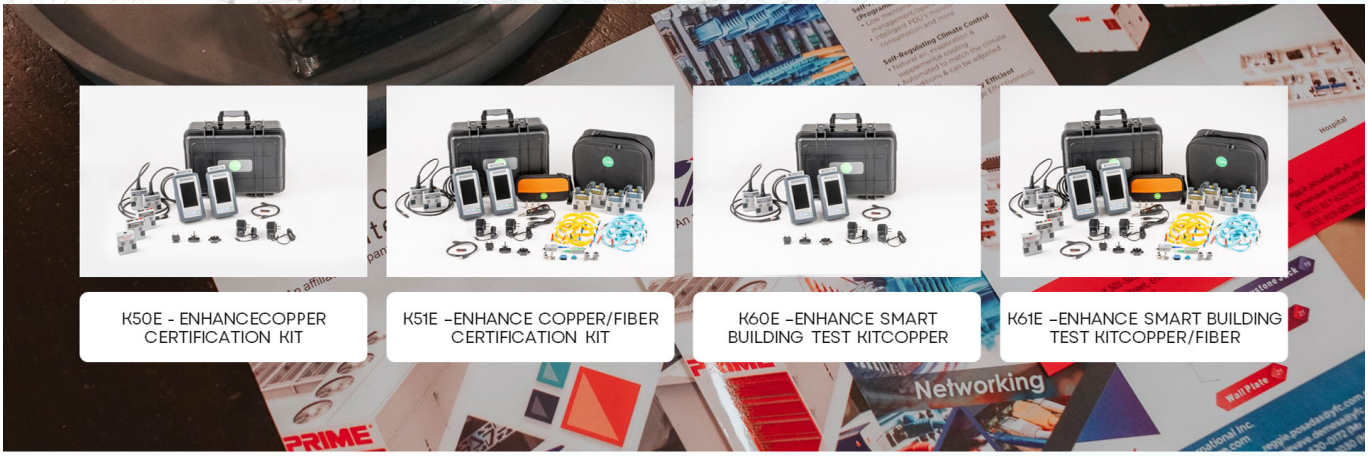

This approach delivers:

- Open software platform that evolves with your network
- Fully standards compliant, dual wavelength bi-directional fiber certification testing
- Real-time operational efficiency & collaborations

Broadband System

This is broadcasting and communication equipment for cable TV operators.

For broadcasting products, there is digital headed equipment that converts terrestrial digital broadcasting, satellite broadcasting and autonomous broadcasting to the RF signal used on cable TV, optical transmitters that convert and send those RF signals as optical signals, optical amplifiers to amplify and distribute optical signals, V-ONU that converts to the TV signal in each home, and peripheral equipment to transmit broadcast waves by FTTH or HFC. For communications products, there is center equipment OLT based on GE-PON transmission equipment for use with FTTH, D-ONU and related equipment for terminals that connect PCs and routers in each home.

InvisiLight Fiber in the Home Kit

Lightera, a pioneering leader in cutting-edge fiber optic solutions, proudly announces the launch of a consumer-installable indoor fiber deployment system – the InvisiLight® Fiber in The Home Kit. This revolutionary kit enables service providers to empower homeowners to optimize their in-home experience by improving their wireless connectivity. InvisiLight Fiber in the Home Kit allows subscribers to centrally position their Optical Network Terminal (ONT) and Wi-Fi Router within their homes to improve Wi-Fi coverage or bring fiber directly to a gamer, using an intuitive and easy-to-follow process.
